## NM Series

### End Suction Centrifugal Pumps

#### General Information

#### Fields of Application

- Water supply and booster stations.
- Irrigation, overhead irrigation and draining.
- Filling and emptying of tanks and containers.
- Circulating of hot and cold water in central heating and air-conditioning installations.
- Pumping of condensate.
- Water circulating for swimming pools.
- Sanitary and cleaning installations.
- For industrial applications and public services.
- Fresh water supply on ships.

#### Pumped Liquids

Thin, clean, non-aggressive and non-explosive liquids free from large solid particles or fibres.

For special applications, please consult to MAS DAF MAKINA SAN. A.Ş.

#### Design

- Single-stage, end suction, centrifugal volute pump.
  - Main dimensions according to EN 733.
  - In addition to 25 basic sizes conforming to norms, we have developed 20 additional sizes. So we have 45 sizes of pumps.
  - Single entry, closed impeller is hydraulically thrust compensated and dynamically balanced.
  - Pump and motor are separate components, connected to each other via a flexible coupling and mounted on a common base plate.
  - Maintenance is very much easier, the impeller shaft and other rotating parts being removable with no need to disconnect the suction and delivery pipes.
  - In fact the use of one extension coupling enables a pump to be dismantled without moving either the driver or the pump casing.
- Maximum interchangeability of components, identical parts can be used with various sizes of a pump, which greatly simplifies and reduces stock of spare parts.

#### Bearings

The pump has sturdy maintenance-free antifriction bearings, which are greased for life with high-temperature grease. A deflector on the shaft prevents leakage fluid from getting into bracket.

#### Shaft Seal

Pumps are supplied as standard a conventional packet gland, lantern ring for water sealing and lubricating of packing.

- Uncooled stuffing box without shaft sleeve is standard. ( Up to 90 °C )
- Uncooled mechanical seal with or without shaft sleeve is optional. ( Up To 90 °C )
- Water cooled stuffing box or mechanical seal is optional. ( 90 – 140 °C )

For a medium different than water, please consult to MAS DAF MAKINA SANAYI A.Ş. for selection of appropriate O-Ring and Mechanical Seal type.

#### Technical Data

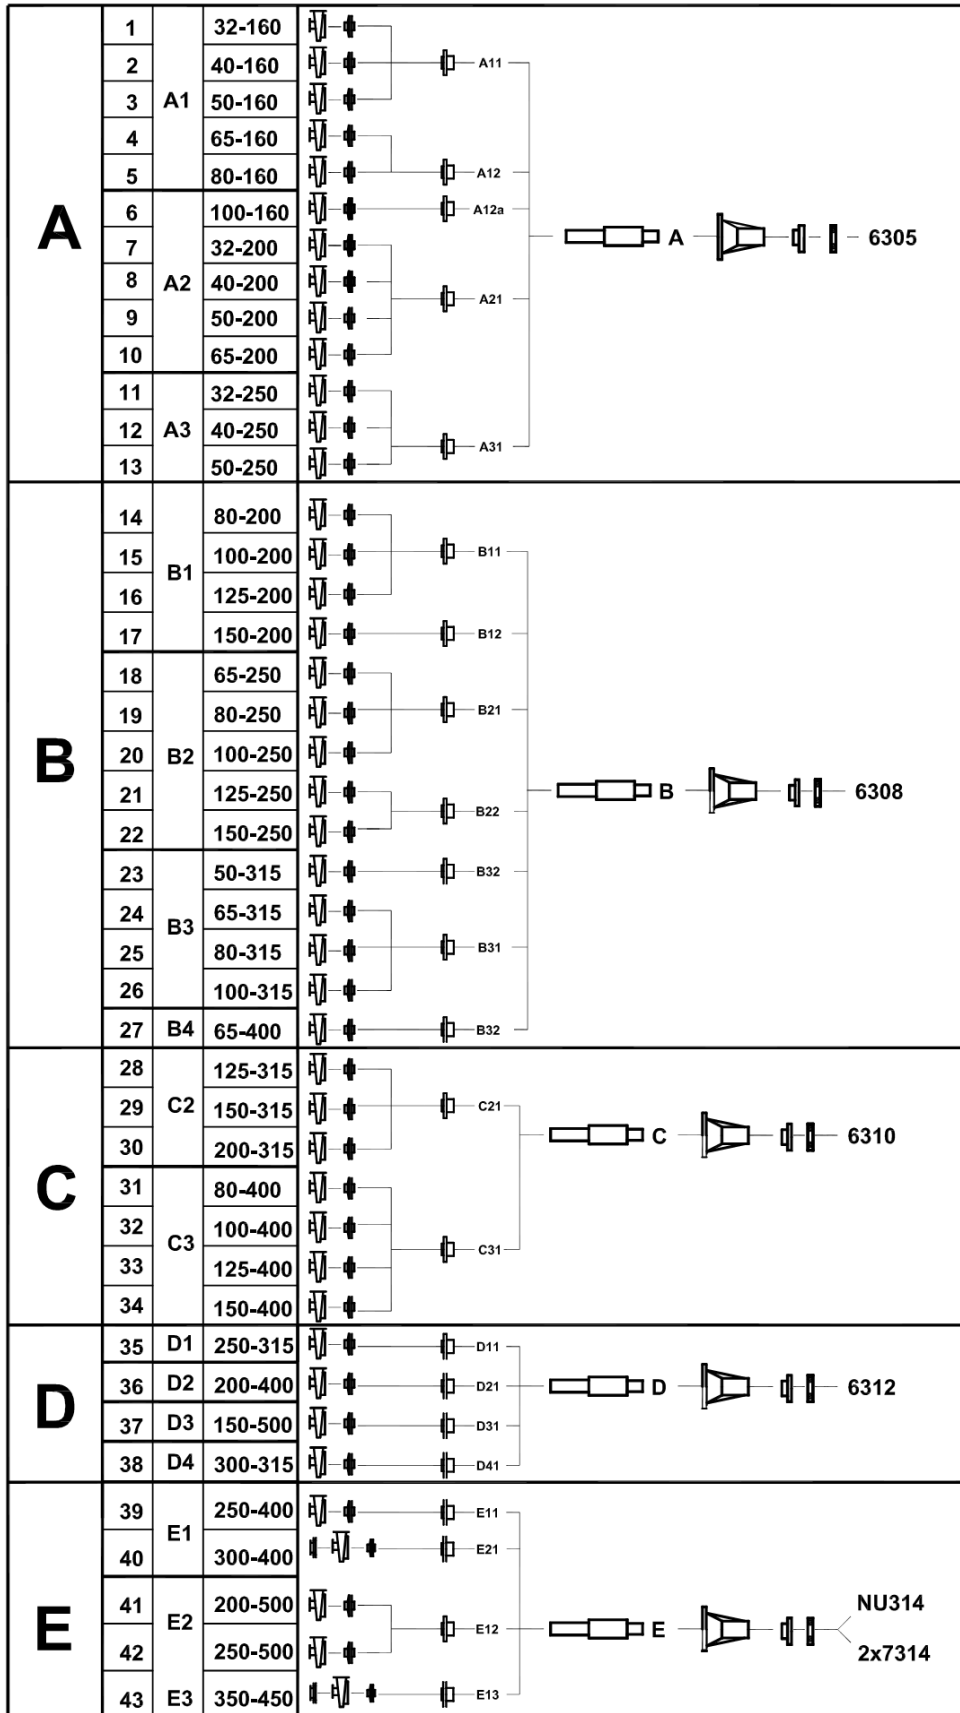

- Suction Flange..... : DN 50 ...DN 400
- Discharge Flange..... : DN 32...DN 350
- Operating Pressure..... : 10 Bar
- Casing Test Pressure..... : 13 Bar
- Operating Temperature.. : -25 – 130 °C
- Impeller Diameter mm ø.. : 160...500 mm ø
- Speed Range..... : 1000 – 3600 RPM
- Capacity Range..... : 5 – 3500 m<sup>3</sup> / h
- Head Range..... : 4 - 105 m

#### Pump Flanges

- Discharge Flanges : DIN 2533 – PN 16
- Suction Flanges : 32-200 DIN 2533 PN 16

**QUENCHING**

A quench is used on the one hand when a single mechanical seal does not function at all or only within certain limits without auxiliary measures or when a double mechanical seal with pressurized buffer medium is unnecessary. When an integral stationary seat stop is fitted, the quench pressure should not exceed 1 Bar.

- ❖ Absorption or removal of leakage by quench medium.
- ❖ Monitoring of the mechanical seal's leakage rate by periodic measurement of the level of the quench medium in the circulation vessel or thermosyphon vessel.
- ❖ Lubrication and cooling of the stand-by mechanical seal.

Exclusion of the air: For media reacting with atmospheric oxygen the quenching medium stops the leakage making contact with air.

58	Mechanical Seal Cover for Quenching
220	Oil Seal
250	Mechanical Seal
400	O-Ring For the Cover

**QUENCH WITH AN INTERNAL CIRCULATION**

A pumped medium is injected into the area of the sliding faces from the discharge of the pumps.

## NM Series

End Suction Centrifugal Pumps

### General Information About Minimum Efficiency Index Implementing

**FAMCO**  
هایپر صنعت

**Mas Grup**

Product Information as per Regulation No. 547/2012 (for Water Pumps with a Maximum Shaft Power of 150 kW) Implementing "Ecodesign" Directive 2009/125/EC

Minimum Efficiency Index for MAS NM Pump Series is shown on the pump label.

MEI values of MAS NM Pump Series are shown on the pump characteristic curves.

Minimum Efficiency Index for MAS NM Pump Series; Minimum 0.4. (MEI $\geq$ 0,4)

Efficiency values of the pump characteristic curves, which are cut diameter, are expressed in %.

NM Series water pumps, the pump efficiency can be achieved more than fix speed in case of variable speed control.

Pump Label

**NM Series**  
End Suction Centrifugal Pumps  
**Performance Curves**

The Performance Curves 50 Hz are based on the kinematic viscosity 1 mm<sup>2</sup>/s and density 1g/cm<sup>3</sup>. Tolerances are acc. to ISO 9906 Annex A.

Load and torque components on discharge flanges :  $F_{xD}, F_{yD}, F_{zD}, M_{xD}, M_{yD}, M_{zD}$   
 Load and torque components on suction flanges :  $F_{xS}, F_{yS}, F_{zS}, M_{xS}, M_{yS}, M_{zS}$   
 Dimension for force and torque : N, Nm

$F_{VD} = |F_{yD}|$  : Amount of vertical load on discharge flange  
 $F_{VS} = |F_{yS}|$  : Amount of vertical load on suction flange  
 $F_{HD} = (F_{xD}^2 + F_{zD}^2)^{1/2}$  : Amount of horizontal load on discharge flange  
 $F_{HS} = (F_{xS}^2 + F_{zS}^2)^{1/2}$  : Amount of horizontal load on suction flange  
 $M_D = (M_{xD}^2 + M_{yD}^2 + M_{zD}^2)^{1/2}$  : Amount of torque on discharge flange  
 $M_S = (M_{xS}^2 + M_{yS}^2 + M_{zS}^2)^{1/2}$  : Amount of torque on suction flange

$\Sigma F_V = 2/3 \times F_{VD} + F_{VS}$  : Sum of vertical loads  
 $\Sigma F_H = F_{HD} + F_{HS}$  : Sum of horizontal loads  
 $\Sigma M = M_D + M_S$  : Sum of torques

The load on the flange is permissible if the following condition is fulfilled.

$$(\Sigma F_V / \Sigma F_{Vmax})^2 + (\Sigma F_H / \Sigma F_{Hmax})^2 + (\Sigma M / \Sigma M_{max})^2 \leq 1$$

For the water filling  $\rho=1$  kg/dm<sup>3</sup> is used. In case the handled liquid has a different density or the impeller is made of other materials having also a different density, calculate moment of inertia according to the following examples.

Example: Pump Size NM 100-250

Handled liquid density  $\rho=1.25$  kg/dm<sup>3</sup>, impeller cast iron GG  $\rho=7.3$  kg/dm<sup>3</sup>

$$I = (0.0625 - 0.0448) \times 1.25 + 0.0448 = 0.0669 \text{ kgm}^2$$

Handled liquid density  $\rho=1$  kg/dm<sup>3</sup>, impeller  $\rho=8$  kg/dm<sup>3</sup> (conversion from GG  $\rho=7.3$  kg/dm<sup>3</sup>)

$$I = 0.0448 \times 8 / 7.3 + (0.0625 - 0.0448) = 0.0668 \text{ kgm}^2$$

Handled liquid density  $\rho=1.25$  kg/dm<sup>3</sup>, impeller  $\rho=8$  kg/dm<sup>3</sup>  
(Conversion from GG  $\rho=7.3$  kg/dm<sup>3</sup> and water  $\rho=1$  kg/dm<sup>3</sup>)

$$I = 0.0448 \times 8 / 7.3 + (0.0625 - 0.0448) \times 1.25 = 0.0712 \text{ kgm}^2$$
